Education

G.L. Bajaj Institute of Technology and Management, Greater Noida, India 2022-2026
BTech - Computer Science and Engineering with Data Science | CGPA : **8.99**

Prudence School, sector 22 dwarka ,New Delhi, India 2022
CBSE (XII) | Percentage : **95%**

Prudence School, sector 16b dwarka, New Delhi, India 2020
CBSE (X) | Percentage : **91.8%**

Experience

SDET Intern | Junglee Games India Pvt. Ltd Gurugram
July'25 - Sept'25

• Developed and executed **mobile automation test scripts** using Java, Selenium, and Appium for Android & iOS platforms
• Automated testing workflows for dynamic UI elements, improving test efficiency and reducing manual effort
• Explored **AI-based testing tools** to accelerate debugging and prototyping processes
• Collaborated with engineering teams and gained exposure to **CI/CD pipelines and real world QA processes**

Skills

Programming : Python, Java, SQL
Frameworks and Tools : Flask, Excel, Scikit-Learn, Git, LLMs, TensorFlow
Data Visualization : Power BI, Matplotlib, Streamlit
Core Concepts : Machine Learning, Databases (DBMS), Object-Oriented Programming (OOP), Data Structures and Algorithms (DSA), Statistics, Data Analysis

Projects

Skinsential *Link↗*
• Built an image classification system using **TensorFlow** & **EfficientNet-B0** to detect multiple skin conditions
• Implemented **Grad-CAM** for model explainability and visual interpretation of predictions
• Deployed optimized TensorFlow Lite model on **Raspberry Pi 4** for real-time edge inference
• Designed complete ML pipeline including **preprocessing**, **augmentation**, **training**, and **evaluation**
• Achieved **93% validation accuracy** and **0.91 F1-score**

AI Agent *Link↗*
• Developed an AI-powered mock interview system using **Flask**, **React**, and **OpenAI API**
• Built **LLM-driven** adaptive questioning system based on candidate responses
• Simulated **real-world** interview scenarios across multiple job roles
• Improved user engagement through **dynamic interaction** flow

TanaavTrack *Link↗*
• Built a stress prediction web app using **ML models and Flask**
• Predicted stress levels as percentage using structured data inputs
• Provided **personalized recommendations** based on predictions
• Developed full **ML pipeline** from preprocessing to deployment
